

WAVEFRONT

**Innovative solutions for increasing oil field production
and enhancing the treatment of contaminated groundwater**

Wavefront specializes in designing and developing leading-edge techniques for oil well stimulation, secondary oil recovery and environmental groundwater remediation.

We have pioneered the development of a unique technology that generates powerful fluid pulses to momentarily expand the pore structure of rock and soil, which dramatically improves liquid flow in the ground.

Wavefront's proprietary pressure-pulse technology creates a highly uniform wave of fluid to "push" oil to extraction wells or distribute treatment chemicals to be in better contact with contaminants. This proven process has been successfully used around the world since 1998.

Wavefront's Powerwave transforms low-producing or even abandoned oil fields into more profitable reservoirs.

For environmental applications, Primawave is a highly effective method for introducing treatment remedies into contaminated underground sites, even in locations that are difficult to access.

Wavefront is establishing a global network of distributors to serve the growing market for cost-effective solutions to increase oil recovery and to effectively treat contaminated underground sites.

Wavefront is headquartered in Edmonton, Alberta, Canada with Alberta offices in Calgary and Lloydminster and US offices in Raleigh, North Carolina and Houston, Texas

CORPORATE HEAD OFFICE

Suite 100, 17608 – 103rd Ave.
Edmonton, Alberta T5S 1J9
Phone: 780.486.2222
Fax: 780.484.7177

HOUSTON OFFICE

9774 Whithorn Drive
Houston, Texas 77095
Phone: 832.220.1400
Fax: 832.220.1405

RALEIGH OFFICE

8004 Looking Glass Court
Raleigh, North Carolina 27612
Phone: 919.424.7563

CALGARY OFFICE

62 Patterson Close SW
Calgary, AB, T3H 3K2
Phone: 403.510.1522

LLOYDMINSTER OFFICE

6606 50th Avenue
Lloydminster, Alberta T9V 2W8
Phone: 780.875.7883
Fax: 780.875.8443
