**WAVEFRONT ENERGY & ENVIRONMENTAL SERVICES INC.  
UPDATE ON ROGERS COUNTY PRODUCTION OPERATIONS  
& SALES OF THE DEEPWAVE<sup>SM</sup> PROCESS**

EDMONTON, Alberta -- September 20, 2005 -- Wavefront Energy and Environmental Services, Inc. is pleased to provide an update on the Chelsea-Alluwe production operations in Rogers County, Oklahoma and sales of the *DeepWave*<sup>SM</sup> process ([http://onthewavefront.com/dw\\_what-is-deep-wave.htm](http://onthewavefront.com/dw_what-is-deep-wave.htm)) by its licensed user in Alberta, Canada.

The Company and its working interest partners, Boulder Oil LLC, and Phoenix Oil LLC continue to make progress in activating production and injection wells, and upgrading facilities at Rogers County. Fifteen of forty production wells are now operational. In addition, six of fourteen water injectors have been activated. The working interest group will see its first sale of oil during the week of September 19, 2005 and it is fully expected that five additional production wells will be on-line the week ending September 26, 2005. Looking forward, the working interest partners have tentatively scheduled drilling of one horizontal production well, and five water injectors for *DeepWave*<sup>SM</sup> systems before the end of 2005. The drilling of these wells is in keeping with the aggressive exploitation strategy the working interest partners have for the lease.

Wavefront President and CEO Brett Davidson stated, "We continue to be pleased at the rate at which we are revitalizing the Rogers County oil field lease. We hope to maintain this trend and have all possible production wells operational by the end of 2005. Furthermore, we remain on target to have *DeepWave*<sup>SM</sup> systems strategically installed to maximize our recovery efficiencies.

Top Gun Sand Pumps and Rentals of Lloydminster, Alberta, a licensed provider of the Company's *DeepWave*<sup>SM</sup> process continue to make advancements in marketing the technology to Canadian heavy oil producers and have recently reported eight royalty sales to the Company. The royalty sales of the *DeepWave*<sup>SM</sup> process range from one-day single well stimulations to one-year installations.

We thank Top Gun for their diligence in marketing the technology and are encouraged that heavy oil operators are looking to the *DeepWave*<sup>SM</sup> process to aid in production. We anticipate further sales from Top Gun as it continues to build a track record in heavy oil production. Management also anticipates the announcement of royalty sales from the Company's strategic licensed user in the coming days."

***About Wavefront Energy and Environmental Services Inc.***

Wavefront develops, markets, and licenses proprietary technologies in the energy and environmental sectors. The Company's *DeepWave*<sup>SM</sup> Technology for fluid flow optimization has been demonstrated to increase oil recovery. Within the environmental sector, *DeepWave*<sup>SM</sup> Technology accelerates contaminant recovery and improves in-ground treatment of groundwater contaminants thereby reducing liabilities and restoring the site to its natural state more rapidly.
