**WAVEFRONT ENERGY & ENVIRONMENTAL SERVICES INC.  
DEEPWAVE<sup>SM</sup> WELL STIMULATION - USED IN THREE APPLICATIONS**

EDMONTON, Alta March 14, 2006/ Wavefront Energy and Environmental Services Inc., a provider and licensor of its proprietary DeepWave<sup>SM</sup> ([http://onthewavefront.com/dw\\_what-is-deep-wave.htm](http://onthewavefront.com/dw_what-is-deep-wave.htm)) Technology for improved oil recovery and groundwater remediation is pleased to announce that three new DeepWave<sup>SM</sup> acid stimulations in horizontal wells have been completed including its licensee's first application in Canada.

The stimulations were completed near Homer City, PA; Fort St. John, BC; and outside of Bakersfield, CA. All of the stimulations were performed by a licensee that will see the Company earn a percentage royalty on the gross revenue of each stimulation. The California stimulation was the third stimulation performed by the operator. It was also their second stimulation that involved a tracer study to further understand the distribution and penetration depth on injected liquids. Production results for the aforementioned stimulations may be available at a later time.

Wavefront President and CEO Brett Davidson stated, "The positive result of prior DeepWave<sup>SM</sup> stimulations have generated significant interest from the user community. Though the Canadian operator is not unfamiliar with DeepWave<sup>SM</sup>, having used it in heavy oil development for several years, we are pleased that they chose to implement the technology in a new area to revitalize waning oil production in a horizontal well. The Homer City, PA operator is a first time user of DeepWave<sup>SM</sup> technology."

Mr. Davidson further stated, "The adoption rate of DeepWave<sup>SM</sup> is steadily increasing with several additional stimulations scheduled with a variety of operators having a varied range of applications. Management is very optimistic that the wide cross-section of applications DeepWave<sup>SM</sup> offers oil companies will generate further interest in the technology. Demonstrating the versatility of DeepWave<sup>SM</sup> in non-conventional applications will be a powerful marketing tool as the Company and its licensee commences global commercialization of the service."

***About Wavefront Energy and Environmental Services Inc.***

Wavefront develops, markets, and licenses proprietary technologies in the energy and environmental sectors. The Company's DeepWave<sup>SM</sup> Technology for fluid flow optimization has been demonstrated to increase oil recovery. Within the environmental sector, DeepWave<sup>SM</sup> Technology accelerates contaminant recovery and improves in-ground treatment of groundwater contaminants thereby reducing liabilities and restoring the site to its natural state more rapidly.
